

The Equilume Stable Light provides horses with biologically effective light creating the ideal stable environment for your horse. It offers timed delivery of blue-enriched white light during the day, soft red light at night, and gradual transitions at sunrise and sunset that mimic natural dawn and dusk.

To operate your Equilume Stable Lights, simply download the free Equilume Stable Light App. The app transforms the way you manage your stable lighting, allowing you to easily pair, control, and customise your individual lights directly from your smartphone or tablet.

The power of Equilume at your fingertips.

Quickly pair, program and manage your stable lights with ease.

PAIRING

Quickly pair lights in range with the push of a button.

OVERRIDE

Temporarily disable program settings.

EMERGENCY

Override red light to blue light in case of emergency.

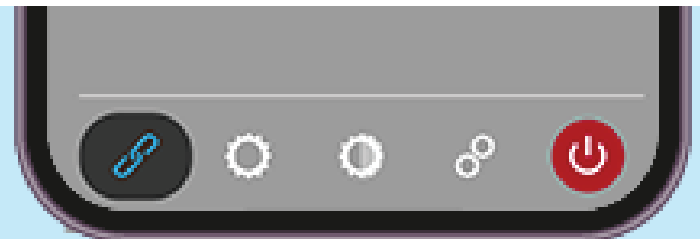

PROGRAM

Select and assign preset or custom lighting programs.

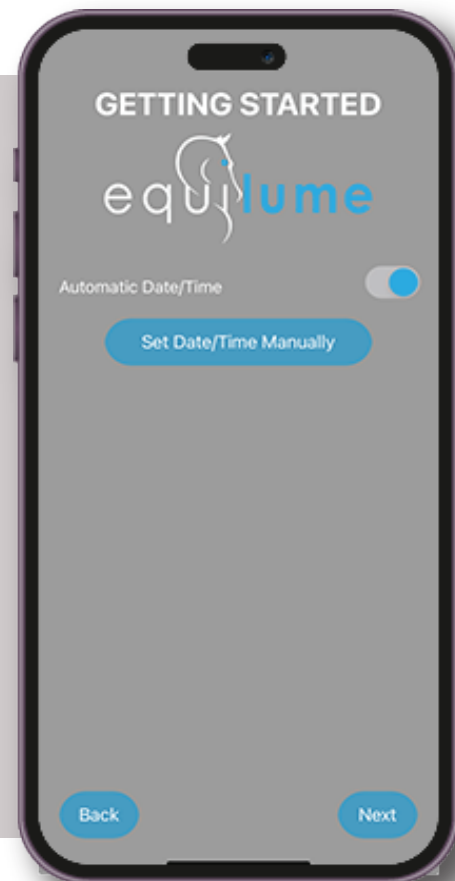

HELP

Access all help and guidelines from one screen.

Getting Started

- 1** **Connect** the Equilume Stable Light(s) to a power source. For best results, install lights in their desired hanging location before connecting to power.
- 2** **Download** the Equilume Stable Light App and follow the on screen instructions to purchase your subscription, set your PIN, and enable Automatic Date/ Time.
- 3** **Pair Your Lights** from the HOME page. Search and select lights in range and pair. Repeat this step until all lights are paired.
- 4** **Program Your Lights** from the PROGRAM page, select lights in range and assign the desired program. Press "Sync Time" on the lights. Repeat this step until all lights are programmed.
- 5** **Close the App** and enjoy your Equilume Stable Lights. Your set up is complete.

FAQ

How many users are there per subscription?

One subscription per device. Equilume Stable Lights can be connected to multiple devices, however, lights can only be operated by one device at a time. Each device will require a new subscription, setup and pairing to operate the lights.

Is internet connection required to operate the Equilume Stable Light App?

Equilume Stable Lights communicate with the App via Bluetooth. An internet connection is required to download the Equilume Stable Light App and purchase the subscription, but it is not necessary to operate the Stable Lights.

Can I use the App to control Stable Lights in more than one barn?

The Equilume Stable Light App allows users to rename stable lights and organise paired stable lights into groups. Grouping enables users to control multiple barns and assign separate lighting programs to each barn as required. Users can create up to 20 groups.

What lighting programs are available on the Equilume Stable Light App?

The app offers preset programs such as Short Day, Long Day, Circadian Annual, and Reflect, as well as the option to create a custom program tailored to your lighting needs. Equilume can assist you in programming a customized schedule that fits your barn.

What will happen if the Equilume Stable Lights are disconnected from a power source?

The Stable Lights have a built-in emergency override function, activated by a power cut. The Stable Lights will turn white for one hour. Lights will revert to original programming after this period.
